Appendix 3: Fate and Age Exposure Time Maps for average-flow conditions, September 2010 in Delta RMP Nutrients Synthesis: Modeling to Assist Identification of Temporal and Spatial Data Gaps for Nutrient Monitoring

## Fate and Age/Exposure Time Maps

- Simulation time span: Sept. 01, 2010 00:15 to Sept.28, 2010 23:45
- RMA Logo should be included on figures
- NOTE - the velocity file for the Sept. 2010 simulations was sourced from the calibration modeling from the Prospect Island project
- 50 particles inserted near inflow locations every 15 min . during the simulation
- Particles inserted in Sacramento, Yolo+Lisbon, San Joaquin, Mokelumne, Cosumnes sources
- Yolo+Lisbon inserted near Lisbon Toe Drain
- Calaveras not considered as a source (flows too low during simulation period)
- Age/Exposure time tracked in entire Delta and in all relevant regions
- The final two slides show the Central Region split into Upper and Lower Regions as Fate Maps
- For region+sources where either few or no particles reach a region, the statistics are not recorded for that source
- Statistics are documented in this file
- In some cases, tidal interactions are highlighted in figures

## Fate and Age/Exposure Time Maps

- Age/Exposure time:
- Particle count is independent of flow rate - all sources therefore treated similarly for particle count calculations in regions
- Particles may be removed from simulation once they reach Martinez
- Exposure time allows multiple entries/exits from the region
- Exposure time and Age statistics are calculated for particles that have entered or left (i.e., been exposed to) the region by simulation end on Sept. $28^{\text {th }}$
- Fate Maps - two parameters are set:
- \# of particles specified for insertion was 100,000 or 150,000 , fewer for smaller regions or where less information needed (e.g. - high flow rate)
- actual number inserted will be lower, table of results gives actual particle count
- Cell size for insertions set at either 50 or 100 by examination of Fate Map output, for the most visually understandable results
- In a few regions including model boundaries, the computational region was modified slightly from the region used for Age and Exposure time calculations

## This is the Average flow period of analysis

|  | Flow Type | SJR | SAC R. | CVP+SWP | CALAVERAS | COSUMNES | MOKELUMNE | YOLO+LIS |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| June, 2011 | High | 10529 | 41397 | 9676 | 103 | 947 | 1786 | 655 |
| Sept., 2010 | Average | 1713 | 16451 | 10403 | 21 | 13 | 163 | 158 |
| Sept., 2008 | Low | 801 | 10461 | 4930 | 32 | 3 | 33 | 110 |

## Structures - Gate and Barrier Positions
